# **Project Planning Phase**

## **Project Planning Template (Product Backlog, Sprint Planning, Stories, Story points)**

| Date          | 16 November 2022                 |
|---------------|----------------------------------|
| Team ID       | PNT2022TMID42479                 |
| Project Name  | Project – Web Phishing Detection |
| Maximum Marks | 8 Marks                          |

### **Product Backlog, Sprint Schedule, and Estimation (4 Marks)**

Use the below template to create product backlog and sprint schedule

| Sprint   | Functional Requirement (Epic) | User Story<br>Number | User Story / Task   | Story Points | Priority | Team<br>Members  |
|----------|-------------------------------|----------------------|---|--------------|----------|--|
| Sprint-1 | Collection of Dataset         | USN-1                | In this task we will be collection different phishing and legitimate url and store it in the csv file.          | 10           | High     | Prasanth   |
| Sprint-1 | Data Preprocessing            | USN-1                | Now the dataset is read and the the null values and outliers are handled as part of this process.               | 10           | High     | Megana<br>Sundaram,<br>Dayana Delsy,<br>Nandhitha            |
| Sprint-2 | Model Building                | USN-2                | In this process we will be using different classification model and will be testing its accuracy.               | 15           | High     | Megana<br>Sundaram,<br>Nandhitha                             |
| Sprint-3 | Application Building          | USN-3                | As a part of this process using the flask framework we will be building the website.                            | 15           | Medium   | Prasanth, Jagadish, Megana Sundaram, Dayana Delsy, Nandhitha |
| Sprint-4 | Train the model on IBM        | USN-4                | As a part of this process we will be training our selected model on the IBM, Integrate flask with scoring ends. | 20           | High     | Prasanth, Jagadish, Megana Sundaram, Dayana Delsy, Nandhitha |
|          |                               |                      |   |              |          |  |
|          |                               |                      |   |              |          |  |

#### **Project Tracker, Velocity & Burndown Chart: (4 Marks)**

| Sprint   | Total Story<br>Points | Duration | Sprint Start Date | Sprint End Date<br>(Planned) | Story Points Completed (as on Planned End Date) | Sprint Release Date (Actual) |
|----------|-----------------------|----------|-------------------|------------------------------|---|------------------------------|
| Sprint-1 | 20                    | 6 Days   | 24 Oct 2022       | 29 Oct 2022                  | 20  | 29 Oct 2022                  |
| Sprint-2 | 20                    | 6 Days   | 31 Oct 2022       | 05 Nov 2022                  | 15  | 31 Oct 2022                  |
| Sprint-3 | 20                    | 6 Days   | 07 Nov 2022       | 12 Nov 2022                  | 15  | 07 Nov 2022                  |
| Sprint-4 | 20                    | 6 Days   | 14 Nov 2022       | 19 Nov 2022                  | 20  | 14 Nov 2022                  |
|          |                       |          |                   |                              |   |                              |
|          |                       |          |                   |                              |   |                              |
|          |                       |          |                   |                              |   |                              |
|          |                       |          |                   |                              |   |                              |

#### **Velocity:**

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{sprint\ duration}{velocity} = \frac{20}{10} = 2$$

We have a 6-day sprint duration, and the velocity of the team is 20 (points per sprint). So our team's average velocity (AV) per iteration unit (story points per day) AV = (Sprint Duration / Velocity) = 20 /6 = 3.33

#### **Burndown Chart:**

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.
